

Hi everyone, My name is Benedicta

Medical profession is a very respectable and honored field of expertise, apart from the fact that I don't like seeing sick people around me, the passion that drives me to it comes from various life experiences.

Being a medical doctor is really great. It's stimulating and interesting. Medical doctors get to witness humanity at its very best and very worst.

I want to be a doctor because it is the best and highest pursuit of a life's work for someone who loves solving problems, relating to and being encompassed by stories of humanity, and is a curious interrogator of data. That's who I am.

The most awesome thing, though, is that you could have an entirely different set of strengths and being a doctor could still be your best and highest use in society. You could be the most brilliant, precise tactile hand worker with extraordinary geo-spatial awareness and a desire to save lives. Your best and highest use could be as a surgeon.
